INTRODUCTION

- Recently, Gestosis score has been claimed to be an unique early signal in predicting the onset of PE.
- Gestosis score (33) had sensitivity, specificity, PPV, and NPV of 58.60%, 96.49%, 95.91%, 97.98% and 96.12%, respectively.
- MAP with high specificity and negative predictive value to only moderately effective due to low sensitivity and positive predictive value.
- Serum homocysteine has a definite correlation with the severity of HDP.

AIM AND OBJECTIVES

To develop a cost effective pre-eclampsia prediction tool using HDP Gestosis score, Mean arterial blood pressure (MAP) and serum homocysteine values.

GESTO-MAP-H

Gestosis score x MAP Score x Serum homocysteine

METHODS AND MATERIALS

The value 0.6 is a moderate positive correlation which means there is a tendency for high X scores go with high Y variable scores and vice versa. The value of R², the coefficient of determination (0.369).

CUT OFF- 100

DISCUSSION

CONCLUSION AND SCOPE OF FUTURE RESEARCH

Contact Dr. Jyoti Wankar 9733551023

Figure 1: Mean Arterial Pressure- Normal's formula.

MAP > 90 mm Hg was taken as abnormal.

Serum Homocysteine levels measured by Enzyme based immunoassay test. A cut of >10 (4) was considered to be increased.
